Project #2

Introduction to flex: Upside Down Mirror Writing

CpSc 8270: Language Translation

Computer Science Division, Clemson University

Brian Malloy, PhD

September 14, 2017

Due Date:

In order to receive credit for this assignment, your solution must meet the requirements specified in this document and be submitted, using the `handin` facility, by 8 AM, Friday, September 29^{th}, 2017. The handin close date is set at three days after the due date. If you submit after the due date but before the handin close date there will be a ten point deduction. No submissions will be accepted after the handin close date and no submissions will be accepted by email.

Project Specification:

The purpose of this project is to help you to become familiar with flex, a tool that recognizes regular expressions. To complete the project you must write a C^{++} program that accepts text as input and writes the text upside down and backwards. To get full credit you must use flex to read all input to your program, your C^{++} code must be well organized and use good practices, and you must be able to handle the characters illustrated in Figure 1 and on the first web page listed below.

Some helpful web sites that contain information on upside down text and mirror writing can be found at:

`https://en.wikipedia.org/wiki/Transformation_of_text#Examples`
